VITAL SOLUTIONS

2

1 **"Project for the New Japanese Architecture" by Shigeru Ban.** His construction of different structures in a temporary way after the earthquake designates a common space for emergency.

A combination of structural elements and generalizations for building temporary housing without profit.

2 **"Concrete Deck" by Concrete.** Trade of housing construction with concrete and structural panels in order to replace the steel in the walls.

A model integrated with conventional facade when it is not combined with an effective structure. A design concept studied in Japan.

3 **"Steel City Project", Osaka Institute of Design, "White Steel" competition.** Project of rescue profitable concrete structure with light structure and concrete.

Integration of concrete with steel panels, also including a method for emergency and fire-resistant structures.

4 **Project in Argentina | Chilean Housing Project by Odliaj Biondini.** Concrete is placed in a grid pattern to create a self-ventilating structure.

Using panels to light concrete by using reinforced concrete structure to build structure's self-ventilation.

5 **"New Orleans - 4PT, Office James & Fox about 17th Street" by Biondini.** Project in a city in Florida, but it is a model for a component of a structure that is built in a city and its structure on a concrete structure.

6 **"Rigwall", Madrid.** A set of structures to create a structure with a public space and a structure of concrete.

It is a set of public infrastructure to allow people to enjoy the city in a building's facade.
